

For Targeted Supplementation for Dairy and Beef Calves

Profile

Milk Primer® is an easy to use, low inclusion supplement to be mixed with pasteurized milk. It is designed for calves facing stress & disease challenges, especially during the first two to four weeks of life. Milk Primer will fortify pasteurized milk to ensure optimum calf health and growth.

Medication - VFD regulated

Oxytetracycline8,000 grams/ton

Neomycin8,000 grams/ton

For treatment of bacterial enteritis caused by *Escherichia coli* and bacterial pneumonia (shipping fever complex) caused by *Pasteurella multocida* susceptible to oxytetracycline; treatment and control of colibacillosis (bacterial enteritis) caused by *Escherichia coli* susceptible to neomycin.

Diflubenuron (CAS #35367-38-5)36.3grams/ton

ClariFly brand of diflubenuron.

For preventing the development of house, stable, face, and horn flies in the manure of treated calves.

Milk Primer

Medicated Pasteurized Milk Supplement

Features

.25 lb/day
feeding rate

Medicated

Spray-dried bovine
plasma protein

Feed additives

Benefits

Easy to use, minimizes impact on the solids level of the finished product fed to the calf.

Oxytetracycline/Neomycin — for the treatment of enteritis and pneumonia.

Provides digestible and functional globulin proteins.

ClariFly — A feed through larvicide to reduce house flies, stable flies, face flies, and horn flies.

MOS — Mannan oligosaccharides derived from yeast cell wall for microbial balance in the GI tract.

Directions for Use (based on 100 lb Calf)

Add .125 lb of PM Primer to 2-3 quarts of pasteurized milk (110-115° F) and mix thoroughly. Feed twice daily.
