

## Formulated to be the Best! Milk Replacer For Young Calves

### Profile

**Excelerate®** isn't just another milk replacer. It's a special formulation of milk ingredients and essential nutrients, carefully balanced to produce taller, leaner calves in top condition. Excelerate is available with all milk, wheat or plasma protein options. It's also available with Bio-Mos® or MOS for added gastrointestinal health. No matter the option, *Excelerate is the key component* of a complete enhanced calf growth program. It's an effective way to reduce the total cost of raising replacement heifers and increase the capacity of your current facilities. And it provides earlier calving opportunities that can directly impact your bottom line.

### Medication Options

#### Deccox (Decoquinat)

For the prevention of coccidiosis in ruminating and nonruminating calves (including veal calves) and cattle caused by *Eimeria bovis* and *Eimeria zuernii*. Feed for at least 28 days during periods of coccidiosis exposure or when experience indicates that coccidiosis is likely to be a hazard.

#### Bovatec (Lasalocid)

For the control of coccidiosis caused by *Eimeria bovis* and *Eimeria zuernii* in replacement calves. This product contains 45 milligrams of lasalocid per pound. Feed to provide 45 milligrams of lasalocid per 100 pounds (1 mg/2.2 lb) of body weight daily. Feed during periods of coccidiosis exposure or when experience indicates coccidiosis is likely to be a problem.

#### NT (Oxytetracycline/Neomycin)

For treatment of bacterial enteritis caused by *Escherichia coli* and bacterial pneumonia (shipping fever complex) caused by *Pasteurella multocida* susceptible to oxytetracycline; treatment and control of colibacillosis (bacterial enteritis) caused by *Escherichia coli* susceptible to neomycin.

### Features

**Bigger:** Lean gains of 907 grams per day

**Better:** Rapid growth and immune system development

**Faster:** ROI (Return on investment)

Agglomerated formula

### Benefits

Maximum lean gain with improved feed efficiency for taller, longer heifers

Maintains heifer growth advantages with fewer health concerns

Earlier weaning, breeding and freshening options and/or a more mature first calf heifer

Quick and easy mixing

### Directions for Use

In any calf-raising program, it is important that calves receive first milk colostrum during the first 24 hours of life (first feeding within 1 hour following birth). Begin feeding Excelerate Milk Replacer on the second day of life.

**MIXING:** Sprinkle 1/2 lb of milk replacer into bucket of warm water (110° F) and bring to a total volume of 2 quarts. Each quart of milk replacer will then contain 11.25 mg of lasalocid.

Always make reconstituted milk replacer as needed for immediate feeding.

**FEEDING:** Beginning on day 2, introduce Sprout milk replacer. Feed as listed below twice per day to provide 45 mg of lasalocid per 100 lb body weight per day.

Calf Weight (lb)	mg Lasalocid required per calf per day	Quarts fed per feeding twice a day
75	34	1 1/2
100	45	2
125	57	2 1/2
150	68	3

Give calves free access to a dry calf starter allowing them to consume all they will eat. Fresh water must be available to the calves at all times.

### Packaging

Bag: 50 lb  
Bag PIN: 706154

*note: each bag includes a tag with specified formulation*
